

Data Science Homework #4

Due Date: September 8

Name: _____

Credit: ☐ Full Credit ☐ Half Credit

Question: Assume that you have a dataset loaded into Python called `students` regarding all the students in our data science class. There are columns called `name`, `major`, `gpa`, and `major_gpa` (where `gpa` is your overall GPA while `major_gpa` is your GPA for the courses associated with your major). In the three boxes below, hand write code for the following prompts: (1) the code to compute the average GPA by major, (2) the code to compute the minimum grade within each major, and (3) the code to compute the maximum grade within each major. Provide these as separate method chains below. Then in the four box on the next page, put them all into one method chain.
